Guidelines for ACUC Membership

This Guideline is intended to emphasize and reiterate both the regulatory requirements and the “best practices” that have developed among the NIH Institutes and Centers (IC) regarding Animal Care and Use Committee (ACUC) membership and the conduct of required reviews and deliberations.

1. The Animal Welfare Regulations\(^1\) (AWRs) and Public Health Service Policy\(^2\) (PHS Policy) mandate several conditions which all NIH ACUCs must meet:
   - No more than three ACUC members may be from the same administrative unit of the facility (AWRs);
   - At least one veterinarian with delegated program responsibility (AWRs and PHS Policy);
   - At least one nonaffiliated member (AWRs and PHS Policy);
   - At least one practicing scientist experienced in research involving animals (PHS Policy); and
   - At least one member whose primary concerns are in a nonscientific area (PHS Policy).

2. ACUC Chairs should be permanent members of the scientific staff (or equivalent).

3. Consideration should be given to appointing an alternate nonaffiliated member to the ACUC.

4. ICs should take full advantage of the NIH awards program to recognize and reward outstanding ACUC members for their efforts in support of the NIH Animal Care and Use program.

5. Consideration should be given to establishing terms of membership on the ACUC, including the Chairperson, which can be renewed with the concurrence of the incumbent. Three-year terms are recommended to provide for acclimation, productivity, and opportunity for holding office on the committee.

6. Candidates recommended for ACUC membership should have the support of incumbent committee members.

7. ASPs with the Scientific Director as PI should have Paragraph O of the animal study proposal form, “certification of review and approval on scientific merit,” signed by the IC Director.

8. ASPs with the IC Director as PI should be reviewed and overseen by the ACUC of the IC which hosts the IC Director’s laboratory and research endeavors. Paragraph O of the animal study proposal form, “certification of review and approval on scientific merit,” should be signed by the host IC Scientific Director.

9. ACUC committee participation can be enhanced by:
   - Providing outside members with ‘extended visitor’ status which provides them with an NIH badge and allows for easier access to the NIH campus and other NIH buildings. The IC ACUC Coordinators are the points-of-contact for completing this process.
   - Allowing participation by video or teleconferencing\(^3\).
